Mr. Moshe Tal  
TK-7 Corporation  
1300 NE. Fourth St.  
Oklahoma City, OK 73117

Dear Moshe:

This is to let you know we've been using TK-7 Super Octane Booster since September of 1986. We started out using it on half the fleet which consists of 1/2 ton pickups and 3/4 ton vans. We've noticed quicker starts, longer spark plug life and about a 10% increase in gas mileage. Our fuel injected engines using TK-7 Super out perform our fuel injected engines that do not use it. Our trucks which use TK-7 have about 150,000 to 200,000 miles on them without major repairs. This compares to our trucks that don't use any TK-7 that might run 100,000 miles before major repairs are needed.

Another important benefit is that prior to using TK-7, we had to use higher octane gasoline (91-92 octane) in many of our vehicles to achieve higher engine performance and to eliminate knock. Since we started using TK-7, we have found that 87 octane gasoline, with TK-7 added to it, out performs the straight 91-92 octane gasoline both in power increase as well as eliminating engine knock.

We now use TK-7 Super Octane Booster in all our fleet and love it. This product has saved us thousands of dollars in repairs and fuel costs. Keep up the good work and Thanks.

Sincerely,
